

6242AU Vantage Vue™ Weather Station with WeatherLink Console

Local Weather Conditions can change over short distances. A local weather station provides an overview of the weather in your area, but this might not reflect the microclimate in your backyard. The Davis Vantage Vue weather station is the perfect solution for anyone who wants a real-time, hyper-local weather information. Vantage Vue weather stations have been providing vital data to homeowners, farmers, gardeners, educators, community leaders, researchers, businesses, and weather enthusiasts for many years.

Features

- Industry leading transmission distance of 300m line of sight.
